

Prototype 2 Test Beam Paper Status

Megan Connors
For TBWC
Hcal Meeting
11/16/2016

Status

- IEEE page limit is 8 pages double column format
- Length beyond this is allowed but requires justification
- Test beam paper will exceed this and material can be justified but draft could use cleaning up (currently ~20 pages)
- Sent a draft to Anne and Craig for structural feedback
 - Comments received by Anne
 - Nearly all EMCal comments from Release 1 have been implemented
- Hcal plots are being updated and 1st release comments still being implemented
 - Complete this week
 - Send draft for major comments to John L. and John H.
- Another round of expert comments before sPHENIX collaboration release?
- Try to get out before holidays/next test beam?

Some specific general comments

- Abhisek will discuss plot updates after new production
- Clean up repetitive pieces
- More emphasis on test beam and prototype and less on sPHENIX
- Figure captions need updating
